

Open the EZBackup Program. If you do not have the EZBackup program it can be downloaded from <http://www.mobilitatsoftware.com/downloads>

Select the Database you wish to backup, then select Tasks -> Backup Database from the menu.

A window will appear asking you where you want to save the database. Clicking the Browse button will let you choose any location on the network (Useful if you are not backup up from the server). If you check the Local File System check box, you will only be presented with local files. Once you have chosen where to save the file, EZBackup will save your backup for you.

After you have run EZBackup for the first time, it will remember where you last saved a backup making subsequent backups much easier. On some systems the Database Server can be very particular about where you are allowed to save backups. If you encounter any errors when setting up backups please call Mobilitat at 1-888-806-6595 or email us at: easyrides@mobilitatsoftware.com
